

Kevin Emanuel Garabita Córdova

Backend, AI & Automation Developer

Mérida, Yucatán, Mexico | +52 938 389 4199 | kevingarabita0@outlook.com

Remote work | Available Monday to Sunday until 2:00 p.m. (classes in the afternoon), weekends included

PROFESSIONAL PROFILE

Seventh-semester student of Software and Technology Development Engineering. Over nine months I built conversational agents and automations in n8n using the OpenAI API for five clients, integrating GoHighLevel, WhatsApp, Zoom, and WooCommerce via REST APIs and webhooks, and I was responsible for monitoring and fixing issues in production. In parallel, I build web applications with FastAPI, React, TypeScript, and Supabase; one is in production with real users.

TECHNICAL SKILLS

Backend: Python (FastAPI), REST APIs, webhooks, authentication and role-based access (Supabase Auth), PDF generation and Excel export

AI & Automation: n8n, OpenAI API, agents with tool/function calling, AI-based document data extraction, Ollama

Frontend & Data: React, TypeScript, JavaScript, PostgreSQL (Supabase), MySQL

Integrations: GoHighLevel (CRM), WhatsApp Cloud API (Meta), Zoom, WooCommerce, Google Maps

Tools: Git / GitHub, Docker, Render, Claude Code

Languages: Native Spanish; Intermediate English (B1) — I read technical documentation without difficulty, conversational skills in progress

PROFESSIONAL EXPERIENCE

AI & Automation Developer — Kobler y Asociados

Mérida, Yucatán | December 2025 – August 2026

- Built five conversational agents in n8n with the OpenAI API, one per client, integrated with GoHighLevel and WhatsApp: they handle the conversation, qualify the lead, and register it in the CRM.
- Motosureste Suzuki:** the agent answers sales and financing questions and filters out prospects with no purchase intent, so sales advisors stopped handling every conversation and could focus on closing sales.
- Replaced manual inventory entry across five branches: the stock PDF sent by Suzuki is processed with an AI model that extracts the data and updates WooCommerce via its REST API.
- Neorgana:** an agent that responds to patients and sends the doctor's calendar to schedule a Zoom consultation, selecting the consultant by language, location, and condition, and triggering follow-up and a quote once the video call ends.
- Lamau Beach:** automated Airbnb stay availability and nightly rates by season.
- Monitored and maintained the flows in production, fixing issues, and took part in client meetings to gather business rules and identify edge cases.

PROJECTS

Field Report Manager — UxmalTechnologies

Freelance | In production since July 2026 | FastAPI, React, TypeScript, Supabase, Render

- Replaced a three-step workflow — a WhatsApp form, manual data entry by another person, and separate evidence collection — with a single form where the technician logs the report and attaches photos, with known data pre-filled.
- Implemented authentication with Supabase Auth and role-based access: each technician sees only their own reports, and each supervisor sees those of their assigned technicians. The supervisor reviews, corrects, and approves; the system generates the PDF and exports the history to Excel. Used by five technicians and one supervisor, with ongoing maintenance.

Controltec Fumigaciones — Pest Control CRM

Freelance, in development (expected delivery: December 2026) | FastAPI, React, TypeScript, Supabase, Render

- Technicians scan the QR code at each control station and log the station and bait status, pests found, and photo evidence on-site.
- Integrated the Meta API for automatic WhatsApp template messages and Google Maps for locating clients. Includes quotes, calendar, clients, and statistics; the client also contracted ongoing maintenance.

EDUCATION

Software and Technology Development Engineering — Universidad Modelo

Cholul, Yucatán | August 2023 – Present (7th semester) | Expected graduation: August 2027

Code kept private due to client confidentiality; screenshots, architecture, and a demo available upon request.
