Available Monday to Sunday until 2:00 p.m. (classes in the afternoon), weekends included

SUMMARY

Seventh-semester Software and Technology Development Engineering student. I build software end to end with Python (FastAPI), React, TypeScript and PostgreSQL, backed by automated tests, Git and Claude Code. At Kobler y Asociados I co-developed five AI agents with n8n and OpenAI. Seeking an intern or junior software engineer role.

EXPERIENCE

AI & Automation Developer — Kobler y Asociados
Mérida, Yucatán | 12/2025 – 08/2026

- Co-developed five WhatsApp conversational agents, one per client, with n8n and the OpenAI API, integrated with GoHighLevel: they handle every conversation, qualify the lead and log it in the CRM.
- Motosureste Suzuki: the agent quotes from the store's current catalog and screens out people with no intention to buy, so advisors can focus on closing sales.
- Eliminated manual stock entry for five branches: an AI model extracts the quantities from the PDF Suzuki sends, and the flow updates WooCommerce through its REST API.
- Neorgana: the agent matches each patient with the right consultant by language, location and condition, shares that consultant's calendar to book on Zoom, and triggers the follow-up and the quote when the call ends.
- Lamau Beach: the agent replies with each Airbnb stay's availability and the nightly rate for the season.
- Kept the flows running in production by monitoring them and fixing issues, and joined client meetings to define business rules and anticipate edge cases.

PROJECTS

Appolo Diagnostic: live workshop system — Kobler y Asociados
In production | 10/2026 | React, TypeScript, Supabase, n8n, WhatsApp, Vercel, Vitest, Claude Code

- Built it on my own, end to end, with Claude Code: the WhatsApp bot in n8n, the Supabase database (RPC and Realtime), the projected React screen and the presenter's panel with serverless functions on Vercel.
- The audience answers a 20-question diagnostic on WhatsApp and sees its results live, with aggregate data only; the screen reconnects on its own when the network drops, and a retry never skips a question.

Pest Control CRM — Controltec Fumigaciones
Freelance | In development (expected delivery: 12/2026) | 07/2026 – present | FastAPI, React, React Native, TypeScript, Supabase

- Solo developer of a FastAPI API that serves a three-view web app (office, field and client portal) and a React Native app that lets technicians finish reports with no signal and sync them without duplicates.
- Each signed report is archived as a PDF for audits and the client is notified on WhatsApp; the backend has more than 1,000 automated tests, and the client also contracted maintenance.

Field Report Manager — UxmalTechnologies
Freelance | Completed, not released | 06/2026 – 08/2026 | FastAPI, React, TypeScript, Supabase, Docker, GitHub Actions

- Built the whole app on my own, designed to replace a three-step process of WhatsApp messages and manual data entry: a mobile form with eight evidence photos, supervisor review and approval, PDF and Excel export.
- Role-based access with Supabase Auth, critical operations in transactional Postgres functions, and pytest regression tests running on GitHub Actions alongside pip-audit, npm audit and gitleaks.

EDUCATION

Software and Technology Development Engineering — Universidad Modelo
Cholul, Yucatán | 08/2023 – present | 7th semester | Expected graduation: 08/2027

SKILLS

- Programming languages: Python, TypeScript, JavaScript, SQL
- Backend and data: FastAPI, REST APIs, webhooks, role-based access (Supabase Auth), PostgreSQL, Supabase, MySQL
- Frontend and mobile: React, Next.js, Material UI, Tailwind CSS, React Native (Expo)
- AI and automation: n8n, OpenAI API, agents with tool calling, AI-based document data extraction, Ollama
- Tools: Git, GitHub, Claude Code, GitHub Actions, Docker, Render, Vercel, pytest, Vitest, Testing Library
- Integrations: WhatsApp Cloud API (Meta), GoHighLevel (CRM), WooCommerce, Zoom, Google Maps

LANGUAGES

Spanish: native | English: intermediate (B1, self-assessed)
